Information: Carolyn Morris at 817/488-6650 or northtexaswalk@pkdcure.org

Despite the fact that few people know about it, polycystic kidney disease (PKD) is the most common life-threatening genetic disease in the United States, affecting approximately 600,000 people. There is not a cure for PKD. More people suffer from PKD than cystic fibrosis, muscular dystrophy, hemophilia, Down’s syndrome and sickle cell anemia – combined.

August 2008

Welcome to the 2008-2009 school year. As always, the PE department has some fun and exciting events planned. This year we want to our focus more on the districts core values; Excellence, Relationships, Character and Integrity, Innovation and Open and Honest Communication which are perfect for what we do in PE everyday.

Our first Rockenbaugh event will be the PKD Walk on Saturday, September 20th at Town Square. One of our students, Lauren MacMillan, was recently diagnosed with Polycystic Kidney Disease (PKD). PKD is one of the most common, life threatening genetic diseases, affecting more people than Down syndrome, cystic fibrosis, muscular dystrophy and sickle cell anemia – combined. Dialysis and transplantation are the only treatment options for kidney failure. There is not yet a cure for PKD. That's why we are encouraging you to join TEAM Rockenbaugh and walk in honor of Lauren and others like her. To join, simply follow the instructions on the back. You can also collect donations by using the attached form or by going to www.pkdcure.org. If you have any questions about PKD please contact Judy MacMillan at 817-421-2010 or judy.macmillan@verizon.net.

Let's build strong relationships by working towards a common goal...a cure is the finish line. Show your character by walking in either the PKD children's Walk (ages 12 and under) at 9:00 am or the Walk for PKD at 9:30am. Walking is great exercise and a great way to start off the school year.

Hope to see you there...Go TEAM Rockenbaugh!

Look for many more innovative ways to strengthen your core values through Physical Education. Exercise benefits us all!

Thanks,
Tricia Pate & Pam Schneider
